

Women in Business: How to maintain the Website!

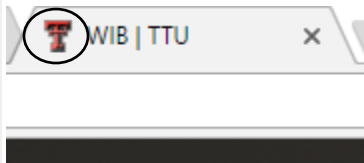

Congratulations on becoming the new webmaster!

Understanding the file system

index.php – This is the home page or landing page. This is the first page that you will be directed to once entering in wib.ba.ttu.edu. This page must be named index.php! This is how your website knows that this page is the home page.

Favico.ico – This is the icon on the website's tab. There is no need to change this.

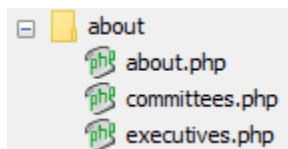

articles.php

Blog.php

join.php

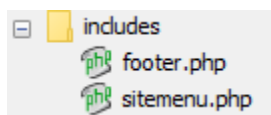

contact.php (Anything that ends in .php) - These are all the pages of the website that our found in the first level of the navigation bar.

About Folder

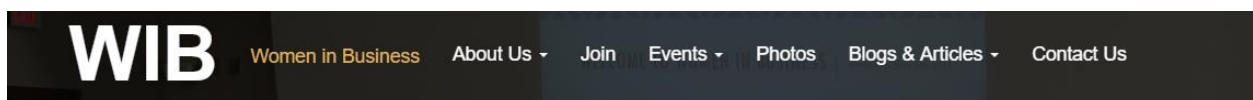

The About folder contains the about page, committees page, and the executive page

Includes Folder

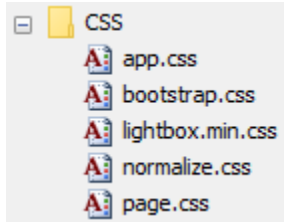

The Includes Folder contains the footer and navigation bar of your website. These elements will be on every page of your website!

This is the **Site menu**

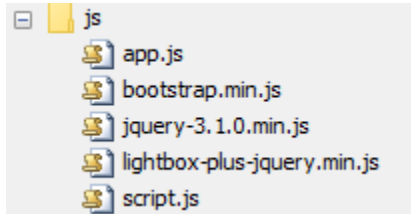

CSS Folder

CSS is the looks and design of our webpage. There will be little to no reason to ever mess with the files in this folder.

JavaScript Folder

The folder contains code that allows the navigation bar and other function on the website to work the way they do.

Do **NOT** touch these files!
